

Bautista Sánchez Sosa

Computer Science student, and programming lover. Went through a boot-camp in order to have useful, actionable and up-to-date knowledge, as well as experience, that could go well along with my career. I define myself as an **extroverted logic-driven person**, always trying to keep learning new things and improving every day.

HTML & CSS

Node.js

Git Flow

React

JavaScript ES6

Express.js

Redux

Sequelize ORM

Prisma ORM

PostgreSQL

MongoDB

Agile Scrum

MySQL

TypeScript

OOP

Languages

Spanish - Native Proficiency

English - C2 EF SET Certificate (Oct 2022), B2 FCE Cambridge (Dec 2018)

Projects

SPA - Dogs

OCTOBER 2022 - NOVEMBER 2022

Given a README with technical requirements, constraints and a project overview, I was able to design and deploy, over the course of three weeks:

- Database models with PostgreSQL and manipulation through Sequelize ORM.
- REST backend API, using Node.js and Express.js (routing, external API interaction, error handling and data manipulation)
- Frontend client (routes, states, components, pagination, filter and sorting), implemented through JS ES6, React and Redux.
- Basic unit tests, implemented with Mocha and Jest.

Paws Founding

NOVEMBER 2022 - DECEMBER 2022

Along six teammates over the course of almost four weeks following the Scrum framework, we managed to:

- Create and design a project from nothing, describing its main features through **user stories**.
- Established priorities and assigned tasks following the **Kanban method**, using Trello.
- Integrated **third party APIs** and frameworks, some being Auth0, MercadoPago, Nodemailer and Leaflet.
- Designed and implemented exclusive dashboards and/or profiles for users, shelters and admins.
- Designed and implemented a **MongoDB database**, using Atlas and Prisma ORM
- Built a microservices-based backend backend in TypeScript

Education

Computer Science - National University of the South

MARCH 2021 - PRESENT

Web Development - Full Stack, HENRY Bootcamp

AUGUST 2022 - DECEMBER 2022
